"Total THC" and "Total CBD" are calculated values before or after Decarb reflecting measurement of the parent compound. Total THC = THC + (THCa * 0.877). Total CBD = CBD + (CBDa * 0.877). Cannabinoids values reported on "as-received" basis. Cannabinoids values reported on "dry-weight" basis. Measurement Uncertainty available for all cannabinoids on request. LOQ = Limit of Quantitation. ND = Not Detected

This report shall not be reproduced, in whole or in entirety, without written approval from Kaycha Labs. This report is an Kaycha Labs certification. Laboratory reports are for informational use only, unless indicated otherwise. The results relate only to the material or product analyzed. Test results are confidential unless explicitly stated otherwise. Total after: 1 year from test end date. Cannabinoid content of solid material may vary depending on sampling error. ND = not detected. QL = parameter. NC = Non-compliant QL parameter. NS = Not Specified. The Qualitative Analysis "pass/Fail" Per Million, ppm/Parts Per Million, Limit of Detection (LoD) and Limit Of Quantitation (LoQ) are terms used to describe the analytical concentration that can be reliably measured by an analytical procedure. Microbiological or Mycotoxin results, in the results are State determined thresholds or action based on control only of measurement. LOD for the analyte. The LOQ data is available from the lab upon request. The "Decision Rule" for the analytes here are based on LOQ. All tests are based on LOQ, ND=LOQ, LOQ=ND=LOQ.

"Total THC" and "Total CBD" are calculated values which are the Sum of each measured cannabinoid multiplied by the molecular mass conversion factor. For Cannabinoid analysis, only Delta-9-THC, Delta-8-THC, THCa, CBD, CBDA are ORELAP accredited analytes. Cannabinoid values reported on plant material are dry weight corrected, uncorrected LOQ for all cannabinoids, 0.1 µg/mL. LOQ's specified in method, are requested as reduction parameters. TD = Tentatively Detected; LOQ = Limit of Quantitation; ND= Not Detected.

This report shall not be reproduced, except in its entirety, without written approval from Kaycha Labs. This report is an Kaycha Labs certification. Laboratory results are for informational use only, unless indicated otherwise. The results relate only to the material or product analyzed. Test results are confidential unless mutually agreed otherwise. Unless otherwise stated, results are for the sample received. Compositional content of batch material may vary depending on sampling error. ID is in control (IC) parameter. ID is for confirmation (IC) parameter. ID=Not Identified. Results for Analyses Jump Parts Per Million, Jump Parts Per Billion, Limit of Detection (LoD) and Limit Of Quantitation (LoQ) are terms used to describe the smallest concentration that can be reliably measured by an analytical procedure. Difference/Repeatability of two measurements, Action Level/Limit: State determined thresholds usually based on current ability of measurement (LOR) for the analyte. The LOQ error is available if not first lab sample request. The "Decision Rule" for the pass/fail does not include the LOQ. The limits are based on ISO/IEC 17025:2017, ISO 9001:2015.
